Job Application for Android/Linux Software Engineer

Dear Mr./Ms.

About Me

I am Jing in early 30s. Before I came to Auckland, I have been working as a Android software engineer in Beijing, China. With the pursuit for clean water, blue sky and freedom air, I came here. I hold a work visa (Silver Fern Visa specifically) and I would like to continue working as a software engineer within Android and Linux domain.

Why Me?

I worked for more than 5 years in world top class corporations, both in new bussiness group. I have solid knowledge on dominant android smart phone platforms from Qualcomm and Mediatek. I can work as a full-stack android developer with exprience down from bootloader, linux kernel, bionic library, zygote and up to framework and app layer. I can also work on bare-metal ARM register level. I am a good time planner, self motivated and a good team player. I am good at finding root cause and love to dig into really hard cases. I am ready for any challenges to come.

Sincerely,

Jing Zhang
